Dylan Lambertson

Full-Stack Web Developer · Raleigh, NC

me@dylanlambertson.dev · (919) 818-5695 · dylanlambertson.dev · linkedin.com/in/dlambertson · github.com/DylanLambertson

SUMMARY

Full-stack developer building on the web since 2020 and running production servers since 2023. Co-founder and CTO of a digital agency who designs, codes and ships complete products solo: an open-source team email platform, a white-label commerce platform and custom storefronts. Comfortable from the UI down to DNS, deploys and Linux.

EDUCATION

Wake Technical Community College — Raleigh, NC — Expected June 2028

Holly Springs High School — Holly Springs, NC — Expected June 2028

EXPERIENCE

Co-Founder & Chief Technology Officer — Lazy Marketing — Greenville, SC (Remote) · 2026 – Present

- Lead technical direction for a 5-person digital agency offering content, ads, social, SEO, web development and branding
- Architect and ship client websites and custom platforms end to end, from scoping to launch
- Building the agency's ops panel (staff dashboard, client portal) on Cloudflare Workers, D1 and R2 with AES-256 field encryption and audit logs
- Own performance, SEO, accessibility and deployment standards on Cloudflare; review code across every client build

Operations & Infrastructure Intern — Veilock (Nubinity LLC) — New Orleans, LA (Remote) · Mar 2025 – Jul 2026

- Administered every server and service for a privacy company, keeping them patched, monitored and healthy
- Owned DNS, routing and server health across the infrastructure; built and maintained the team's CI/CD pipelines
- Rebuilt veilock.com in Astro and TypeScript and handled ongoing brand and marketing web work

Full-Stack Developer — Independent — Remote · 2020 – Present

- Design, build and support custom sites, storefronts and full platforms for direct clients
- Hand-write Shopify OS 2.0 themes, integrate Stripe, and run client hosting, DNS and Linux servers

PROJECTS

InboxOS — Open-source, self-hosted team email platform — 2026

- Built solo; in daily use within ~3 weeks and released as InboxOS 1.0 under AGPL in Oct 2026
- Shared inboxes across domains with assignments, notes and collision warnings; setup wizard with live DNS checks
- Admin console with passkeys, enforced 2FA, SCIM provisioning, retention and a full audit log

TypeScript · Hono · React 19 · TanStack Query · Tailwind 4 · Cloudflare Workers, D1, R2 · Resend · Vitest

LooksLab — White-label e-commerce platform on Cloudflare's edge — 2026

- Grew a live store into a full ops platform with role-based admin and audit log, redeployable per brand in minutes
- Built invoice checkout across 5 payment rails, a loyalty program and a referral engine with a fraud review queue

React · Vite · Cloudflare Workers, D1 · Resend · Discord API

Polar Planet — One storefront, built twice — 2026

- Custom Astro + React store with Stripe Checkout, accounts and admin back office on Cloudflare's free tier
- Ported pixel-for-pixel into a hand-written Shopify OS 2.0 theme that passes Shopify's theme-check linter

Astro · React · Tailwind · Cloudflare Workers, D1, R2 · Stripe · Shopify · Liquid
